Fuel Control Actuator Remanufacturing

Flight Diesel is currently offering a remanufacture and return (R&R) program for the fuel control actuator found on CP3 pumps. Also known as an "MPROP," this actuator is responsible for metering fuel flow from your CP3 high pressure injection pump to the fuel rail.

- Remanufacture and return program launched in Early 2014
- All units are completely disassembled and precision cleaned
- Components are recertified to tight tolerance specifications
- All gaskets and seals are 100% replaced with new
- Broken connectors can be fixed with our new repair process
- Conversion from one application to another is possible on certain actuators
- Each actuator is tested on an actual CP3 pump using state-of-the-art equipment

Make	Year Range	Flight Diesel PN
Cummins® 5.9L	2003-2007	R928400666
Cummins® 6.7L	2007.5-2012	R928400642
GM® Duramax LB7 6.6L	2001-2004	R928400535
GM® Duramax LLY 6.6L	2004.5-2005	R928400653
GM® Duramax LBZ 6.6L	2006-2010	R928400673
