CP3 Fuel Injection Pumps

Flight Diesel is offering remanufactured Common Rail Pumps (CP3) for Cummins® 5.9 Liter and 6.7 Liter engines used in Dodge® pickups. These precision high-pressure pumps are fully remanufactured to tight tolerances. Listed below are just some of the features and benefits when choosing a Flight Diesel branded Common Rail Pump.

- Main Drive Shaft - Any grooves in excess of .0025 in the lip seal area will prompt us to chrome harden the entire surface. This will actually make our new shaft with a surface area much harder than the original design
- Suction Valves - We incorporate a re-work process that will insure a proper mating contact between the valves and seating area
- Gear Pump - We will replace at 100% the mating surface opposite the gears showing any signs of wear.
- Fuel Control Actuator - Each pump receives a remanufactured fuel control actuator that has undergone complete disassembly and any connector damage repaired
