Ford® GPCM Remanufacturing Program

Flight Diesel has expanded our current aftermarket offering to include remanufacturing of Ford® Power Stroke Glow Plug Control Modules. These modules are a critical part of vehicle cold start and emissions control during warm up. Module function provides up to 20 amps of current to each glow plug until they reach temperature.

- Remanufactured to OE quality level
- All units are functionally load tested using automated equipment applying actual vehicle loads
- All units undergo tri-temperature testing to identify potential issues
- All units have critical components re-soldered to ensure electrical connections are better than new

Make	Year Range	Reference PN	Flight Diesel Part Number
Ford F-250/550 6.4L	2008-2010	YC3Z12B533AA DY876 1828565C1	FSR1828565C1
Ford F-Series & Excursion 6.0L	2003-2007
