6.6L Duramax LML Injectors

Flight Diesel has expanded the current Common Rail Injector offering to now include Piezo injectors for the 6.6L GM® (2011-2014).

Each Piezo Common Rail injector is subject to a thorough remanufacturing process, utilizing the same successful techniques and test methods common to all injectors remanufactured by Flight Diesel.

- Multiple inspection and testing points for all components.
- All torque equipment is checked and recorded daily before the start of the shift.
- Piezo actuators undergo a “Piezo Performance” test that captures critical data that other test benches can not.
- Each Injector is individually tested on state-of-the-art test equipment to check for proper engine operation.
- All test results are recorded and verified that they meet the necessary specifications.
- As a quality check we run master injectors before every shift or for any part number change.
