New Replacement PMD

The Pump Mounted Driver (PMD) found on 6.5L DS4 injection pumps were found to have a limited lifespan due to overheating issues. This electronic device is mounted directly to the side of the DS Fuel Injection pumps for the General Motors Diesel applications. Flight Diesel Engineers did a complete redesign and product upgrade for this critical component. Many features were improved upon from the original O.E. design. Components were changed to adhere to the harsher environments that caused the O.E. design to fail.

Engine	Year	Customer Part # References	FSEG Order #
GM 6.5L	1994	30214, 34264, 34583, 35976	505521
GM 6.5L	1994-2003	30214, 34264, 34583, 35976	505521
